

KPS XcalibuR touch

Modern selling power – Mobile and in the web!

KPS XcalibuR touch is a digital sales assistant that allows you to determine design versions or colour combinations easily, quickly and confidently. Your sales staff immediately have all the important information for configuring your product range.

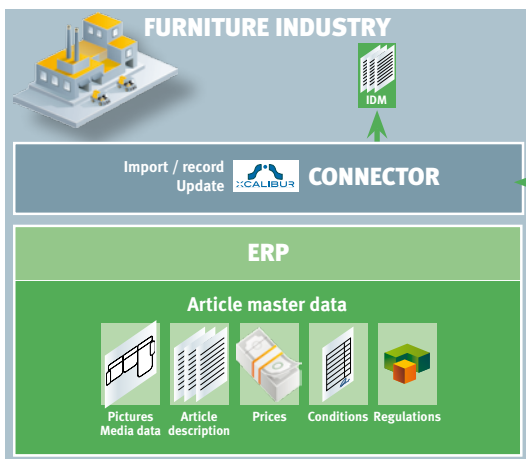

KPS XcalibuR touch is available in two versions: new as stand-alone solution for a tablet and already proven as solution integrated completely into the merchandise management process (MHS/SHD ECORO). The software is also available as native application for iOS and Windows. With this application, you are able to quickly and easily visualise and configure furniture as well as perform precise commercial configurations.

- Planning is possible in 2D and 3D
- Interesting price introduction for mobile configuration on POS
- Standard application on POS of the trade or in the scope of a kiosk system
- Integration into the website as simple configurator and / or planner for industry and trade or can be integrated into the web shop
- Clearly arranged representation of all manufacturers, series, articles, options and option values
- Needs-based transfer of values, including plausibility check
- Adoption of the image pictures with materials of the article selected
- Integration of IDM padding and living data
